

The FGG/BM/CZ™ System Compatible Program

A M E R I C A S

Eliminate Questions About Chemical Compatibility

The FGG/BM/CZ™ System Compatible Program is designed to test and monitor ancillary products on an ongoing basis to ensure chemical compatibility with FlowGuard Gold® and Corzan® water distribution systems and BlazeMaster® fire sprinkler systems. Over the last 45 years, billions of feet of FlowGuard Gold®, Corzan® and BlazeMaster® pipe have been successfully installed in millions of homes, condominiums, apartments, hotels and high-rise buildings around the world without incident.

Occasionally there have been instances where our piping systems were damaged when coming in contact with incompatible ancillary products such as thread sealants, leak detectors, firestops, etc. Thanks to this exclusive Program, installers can simply check the label for the new FGG/BM/CZ™ System Compatible mark.

This exclusive Program confirms chemical compatibility with our CPVC products:

- **FlowGuard Gold®** pipe & fittings
- **BlazeMaster®** pipe & fittings
- **Corzan®** pipe & fittings

Products are continually being added to the FGG/BM/CZ™ System Compatible program.

Refer to www.flowguardgold.com,

www.blazemaster.com or www.corzancpvc.com

for the most current list of compatible products.

CPVC products are made with base resins having different molecular weights and varying chlorine content as well as different compound additives. Therefore, the FGG/BM/CZ System Compatible program can only verify the chemical compatibility for the products with which they have been tested (i.e. Lubrizol products.).

FLOWGUARD GOLD®
PIPE & FITTINGS
NOT A DROP OF DOUBT.
